Node Assignment

By implementing this assignment you will learn how to use different node modules.
These are the node modules which will be used in this project:
- http
- fs
- Os

The application will have home, about and contact page. When a user navigates on different part of the application, the application will track the user. All the information collected about the user will be save in track.user.txt file.
Every tracked activity will be on a separate line as in shown below.
//track.user.activity.txt

```
User: Integrify-PC user ip: 192.0.0.81 checking time : 15.7.2018 20:10 checked page:home
User: Integrify-PC user ip: 192.0.0.81 checking time : 15.7.2018 20:15 checked page:contact
User: Integrify-PC user ip: 192.0.0.81 checking time : 15.7.2018 20:30 checked page:
User: Unkown-PC user ip: 192.125.0.81 checking time : 15.7.2018 20:38 checked page:about
```

Contact page add send email to our personal email then when it works to Asabene

Add navigation at the top as a header
